

## ISO 22301 - Business Continuity Management System (BCMS)

### Ask for a certification

We implement the certification at your company or at the premises required by you.

## Charakteristika

**ISO 22301 Business Continuity Management certification is suitable for all organizations that want to:**

- Establish and validate security policies and security strategies from physical, technical, IT, compliance to personnel security.
- Ensure the organization's strategic and tactical capability, preparedness and timely response to incidents and disruptions.
- Effectively assess the risks associated with disruptions to the organisation and analyse the impact to the business, i.e. know what threatens key processes and have adequate measures in place
- Maintain a positive relationship with customers by addressing disruptions to the organisation in a timely manner. This means that the organisation remains able to meet its obligations to them and maintain its credibility.
- Protect assets and people effectively and minimize the need to improvise in crisis situations because a backup plan is already tested and prepared in advance.

## Doplňkové informace

The detailed procedure and rules of certification will be provided by the staff of the certification body.

The Czech Society for Quality is accredited for certification according to ISO 22301 by the Czech Institute for Accreditation.
